Open to international opportunities – remote or relocation

SUMMARY

Full-stack developer with ~4 years building **real production systems**, not demos. I cover the **whole environment** — React on the front, Node on the back, down to the Linux servers, network and firewall behind them. I build **developer tools and applied AI**: an MCP server with 137 tools and an autonomous dev-agent IDE. Seeking an **international, remote-first role**.

EXPERIENCE

Full-Stack Developer · Babita Jul 2023 – Present
Belo Horizonte, Brazil · Hybrid

- Built and maintained the **Babita commercial ecosystem** — store front (POS), reseller portal, supplier and order management — as separate front/back apps in **Node.js and React**.
- Integrated web sales with a **Sankhya ERP on Oracle** plus a PostgreSQL layer, automating stock and order sync and removing repetitive manual work.
- Designed **REST integrations** and **Selenium** automations to keep multiple apps consistent across the business.
- Owned the **full infrastructure**: Linux servers, **pfSense** firewall and segmented network, a **secure remote-access VPN** for home office, reverse proxy with auto-HTTPS (**HAProxy + ACME**), **Proxmox** virtualization, file services (Samba/Webmin) and automated backups (UrBackup).
- Implemented **token-based crypto** for authentication and sensitive-data handling.

IT & Development Intern · Rádio Inconfidência Feb 2022 – Jun 2023

- Supported internal systems and infrastructure and contributed to development tasks — the foundation of a full-stack + ops skill set.
- Earlier: **visual design & communications** (PASCOM, volunteer) — the origin of the design pillar in my product UIs.

SELECTED PROJECTS

VisualInspector — MCP server + desktop product github.com/rafaelmrdev

- Authored a developer tool exposing **137 tools across 19 categories** (browser automation, design-token scraping, competitive UI analysis) through a **Model Context Protocol** server with a plugin registry.
- Built its own infra — pooled Playwright sessions, caching, rate limiting, optional **Claude Vision** — shipped as an **Electron** app with offline licensing.

Stack: Node.js · MCP · Electron · React/Vite · Playwright · Claude API

LEDGB Orchestrator — autonomous dev-agent IDE github.com/rafaelmrdev

- Building a commercial **VSCode-like web IDE** where an AI agent reads, writes and runs code, with command output streamed live over **WebSocket** — a self-built alternative to Cursor / Claude Code.
- Dual model provider — **OpenRouter** (200+ cloud models) and local **Ollama** (fully offline) — over a triple workspace: local files, remote servers via **SSH/SFTP**, and Google Drive (OAuth2).
- Shipped as an **Electron** desktop app with offline licensing (AES-256-GCM + HMAC-SHA256).

Stack: Node.js (ESM) · Express · React 18/Vite · WebSocket · ssh2 · Ollama/OpenRouter · Electron

QueryBoard — local-first RAG system github.com/rafaelmrdev

- Built a **retrieval-augmented generation** pipeline running entirely on local hardware — language model via **Ollama**, **ChromaDB** vector store and PostgreSQL — for privacy and zero per-token cost, with a React dashboard.

Stack: Node.js · LangChain · Ollama · ChromaDB · PostgreSQL · React · recharts

SKILLS

Languages: JavaScript, Python, Java, SQL, Bash	Frontend: React, React Native (Expo), Web Components (Stencil), HTML/CSS
Backend: Node.js, Express, REST APIs, WebSocket, SSH/SFTP, MCP, LangChain	Databases: PostgreSQL, Oracle, MongoDB, ChromaDB (vector)
AI / ML: RAG, local LLMs (Ollama), OpenRouter, Claude Vision, agent loops	Infra / DevOps: Linux, Networking, pfSense, Proxmox, HAProxy + SSL, VPN, Docker
Automation: Selenium, Playwright, Cheerio, scheduled jobs	Tools: Git, Figma, TypeScript (tooling / when required)

EDUCATION & LANGUAGES

B.Sc. in Computer Science · Estácio University 2024 · GPA 8.76/10

Plus 14 professional certifications · Communication & stage presence course (Vinh Giang, 2026)

Languages: Portuguese (native) · English (intermediate, improving — comfortable reading and writing technical English)
